

WELDER

Do You Want a Daring Maker Career?

Welders use tools that put out intense heat to connect metal pieces together. This work is just as likely to occur on a bridge or skyscraper as it is in a factory. In fact, rebuilding aging bridges, highways, and buildings will be a big challenge for future welders. The job requires an ability to read blueprints and other types of technical plans. This manufacturing career requires smart thinking and physical stamina. The job can be dangerous so welders must pay close attention to every detail of each job. Most welders have a high school diploma and professional certification through a vocational school or community college. Apprenticeships are another way to learn this trade.
